

This chart will help you determine whether you have cool or warm undertones, when selecting which shade of the Pressed Powder or Loose Powder Bronzers. Select your skin colour, then determine whether your skin is warm or cool. The most common assumption is that someone with fair skin has cool undertones and that darker skin has warm undertones. People with fair skin can have the same warm undertones as someone with darker skin or vice versa.

WARM -Dark Tan- Pressed or Loose Powder Bronzer	Your skin tans easily	Your skin tends to have a green/yellow flush, particularly in cooler weather	On your inner wrist you will mainly find blue veins	Your skin tans easily	Your skin has chocolate tones	On your inner wrist you will find mostly green veins
	LIGHT		MEDIUM			DARK
COOL -Light Tan- Pressed or Loose Powder Bronzer	You are easily sunburnt	Your skin tends to have a pink/red flush, particularly in cooler weather	On your inner wrist you will find mostly green veins	You are easily sunburnt	Your skin tends to have a bluish flush	On your inner wrist you will find mainly blue veins
